RELEVANT EXPERIENCE

I have extensive experience in the analysis and application of satellite and airborne observations, in-situ data, and model simulations to study synoptic to decadal changes in the marine environment, with specific focus on biophysical interactions, ecosystem dynamics, and carbon fluxes. My current research ranges in scale from the open ocean, investigating the influence of submesoscale ocean dynamics on upper ocean biology, to coastal and inland waters, assessing variability in water quality and the current condition of coral reefs.
